

PLYWOOD PRINT GUIDE

FINNISH WOOD / MADE IN FINLAND / PRINTED IN HELSINKI

Here at Plywood Print we pride ourselves on only using the highest quality Finnish Birch Plywood.
All from sustainable sources within Finland, that are both FSC and PEFC certified.

All our wood is the highest quality 'AB' grade, which means it is free from knots, patches and discoloration, giving you the best quality prints.

TOP 'AB' SURFACE QUALITY

LOW QUALITY PLYWOOD

Everything we make is produced in our own workshop in Helsinki, we do not outsource any work to 3rd party printing companies. This way we can ensure faster production times and the perfect high quality finish that you expect when you order a Plywood Print.

Please contact us to ask for custom size and price options.

COLOUR / QUALITY SETTINGS

The truth is, you can print your photos as large as you want! But, if you enlarge it too much, you're going to start to see individual pixels in your image. we use state of the art printing technologies which print over 600 dpi, but this is much more than is needed for printing on wood. The higher the resolution (dpi) of your images the better. Because we are printing on wood we have found even images at low quality 150dpi have printed well.

Here is a guide to help you choose the best size for your image size.

Photography device	Image size (pixels)	Maximum Recommended Size	
		Low quality print	High quality print
Copied from Social media*	1024 x 768	20x30cm	10x15cm
Iphone 4 (5MP Camera)	2048 x 1536	30x45cm	20x30cm
Iphone 5/ 6 (8MP Camera)	3264 x 2448	50x75cm	30x45cm
12MP Camera	4290 x 2800	70x100cm	50x75cm
Professional 24MP Camera	6496 x 4872	70x100cm	70x100cm

*When copying images from social media (facebook / instagram) the images are much smaller than the original image you uploaded to social media.

PRINTING ON WOOD

When printing directly to the surface of wood, it can change an image slightly and will not look the same as if it was printed using traditional printing techniques. We do not print with White Ink so all areas of the photo that are white or very light in colour will appear the natural wood colour. This gives a warm natural feel to the image, making every print completely unique. Printing on wood will make images very slightly darker, but it will still have all the vibrant colour of the original image.
